

**PRIORY SCHOOL  
LEWES  
EAST SUSSEX**

A new single storey standalone Special Educational Needs and Autism Spectrum Disorder teaching unit has been constructed at the school, a mixed comprehensive for pupils aged 11-16 years. Priory School is situated within the South Down National Park.

Construction is traditional, with concrete strip foundations, precast concrete floors, masonry walls and timber roof with single ply coverings. The unit was designed using materials in keeping with the character of the existing school buildings.

The facilities include classrooms and group room, sensory room, WCs and care suite. External works undertaken by the company's in-house Groundworks and Civil Engineering Department include sewer diversion works, drainage, fencing and making good paths. Safety of pupils, staff and visitors was paramount throughout the project. Pupil pedestrian routes were managed with fencing and a small crossover which was marshalled during vehicle movements.
